## Features

Timer modules for use in conjunction with relay \& socket.
86.00 - Multi-function \& multi-voltage timer module

- Timer module for 90 and 92 series sockets
-Wide supply voltage range (12-240 V) -LED indicator

Al: ON delay
DI: ON pulse
SW: Symmetrical recycling: ON start

wiring diagram without signal START
86.00

- Time scale: from 0.05 s to 100 h
- Multi-function
- Plug-in for use with 90.02, 90.03 and 92.03 sockets

## Features

Timer modules for use in conjunction with relay \& socket.

### 86.10 - ON delay timer module

86.20 - ON pulse timer module

- Timer module for 90, 92, 94 and 95 series sockets
- LED indicator

NOTE: time scales and functions must be set before energising the timer.

Functions

Without signal Start= Start via contact in supply line (A1).
With signal Start = Start via contact into control terminal (B1).

Wiring diagram
Without signal START

## With signal START

* With DC supply, positive polarity has to be conneted to B1 terminal (according to EN 60204-1).

## (Al) ON delay.

Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs when power is removed.

## (DI) ON pulse

Apply power to timer. Output contacts transfer immediately. After the preset time has elapsed, contacts reset.

## (SW) Symmetrical recycling: ON start.

Apply power to timer. Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied. The ratio is $1: 1$ (time on = time off).

## (BE) Signal OFF delay.

Power is permenently applied to the timer.
The output contacts transfer immediately on closure of the Signal Switch (S). Opening the Signal Switch initiates the preset delay, after which time the output contacts reset.

## (CE) Signal ON and OFF delay.

Power is permenently applied to the timer.
Closing the Signal Switch $(\mathrm{S})$ initiates the preset delay, after which time the output contacts transfer. Opening the Signal switch initiates the same preset delay, after which time the output contacts reset.

## (DE) Signal ON pulse.

Power is permenently applied to the timer.
On momentary or maintained closure of Signal Switch (S), the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.

## (EE) Signal OFF pulse.

Power is permenently applied to the timer.
On opening of the Signal Switch $(S)$ the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.
(FE) Signal ON pulse + OFF pulse.
Power is permenently applied to the timer.
Both the opening and closing of the Signal Switch (S) initiates the transfer of the output contacts. In both instances the contacts reset after the delay period has elapsed.

## (Al) ON delay.

Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs when power is removed.

## (DI) ON pulse.

Apply power to timer. Output contacts transfer immediately. After the preset time has elapsed, contacts reset.
